REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Independent claims 21 and 35 have been amended to define the grip portion as a "pistol grip portion". The Examiner takes the position that the term "pistol grip" is a well known term that has an ordinary definition which is consistent with what is intended to be claimed (note Fig.4). Furthermore, the pistol grip portion is defined as having a longitudinal axis extending from a first end to a second end that is opposite the first end. The operation section is coupled to the first end of the pistol grip portion and the proximal open end of the instrument channel for inserting the treatment instrument is provided at the second end of the pistol grip portion. This defines the position of the proximal open end of the instrument channel (note 11, Fig.16) at the proximal most end of the grip portion. Although the prior art of record show pistol grip portions and instrument channels as the proximal end of the device (e.g., Grabover et al., U.S. Pat. 5,785,644), these references fail to specify that the instrument channel opens at the end of the pistol grip *opposite* the end coupled to the operation section. Although Rossoff (U.S. Pat. 5,183,031) shows a fluid channel (38) *near* the end of the pistol grip, the channel does not open at the *end* of the grip, and the Examiner agrees with Applicant that such channel would not necessarily allow for a treatment instrument to extend from the proximal open end of the channel to the distal end of the device. In any event, Rossoff does not disclose a treatment instrument in combination with the disclosed device and thus does not contemplate insertion of such instrument in the above mentioned channel. Therefore, the combination of elements in claims 21 and 35 are not explicitly taught or fairly suggested in the prior art of record and are thus allowable.
